

### Infoworld S.r.l. and SID2U strengthen technology collaboration

Milan / Dublin / Bari / Cork – 5<sup>th</sup> January 2007

SID2U Limited recently launched its highly acclaimed Enterprise offering ASA (Automated Systems Administration) into the Irish market and is swiftly moving ASA into Europe starting in Italy and Switzerland, announcing today its partnership with Infoworld, Milan.

ASA offers a highly customizable and all-in-one system designed to ease the burden of managing network environments as well as to strengthen security defences and support regulation compliance (e.g. SOX, BSA, etc.). ASA simplifies critical and multiple labour-intensive system administration tasks quickly and efficiently. The all-encompassing ASA product comes with a host of features:

- Change management - early warning alerts with diagnostic information to mobile phones
- Software deployment - centrally update desktops with the latest/new software
- Bandwidth monitoring - monitor IP networks and set bandwidth limits
- Patch management - *Microsoft O/S, McAfee & AVG* anti-virus software
- Software licence control - save money by renewing only essential software licences
- Asset management – motherboard level inventory, asset tags, police identifiable records
- Backup monitoring - tail backups - failure triggers an alert to mobile phone, 24/7
- Remote desktop control – *VNC compatible* protocols
- Network utilities – ping management, label printing, machine maintenance history and more.

SID2U and the Infoworld S.r.l. (Italy) have expanded their technology collaboration to advance desktop and network management systems for both the Italian and Swiss markets. Both parties signed distributorship partner contracts in December 2006. Commenting on the occasion, Dr. Paola Barracona, Managing Director, said, "With ASA, the world of systems administration and network management will be significantly improved. It truly represents the future of desktop and network management support. ASA has a vast breath of desktop and network technology in one single product, enabling system administrators and network managers to monitor and manage their multi-site environment from a central point and 24/7 through mobile device support. We are delighted to partner SID2U.com and to provide our existing customer base with this most powerful product to emerge from Ireland. ASA will help Infoworld to consolidate our position, satisfy demand from our existing customers and evolve the business in an highly competitive marketplace."

ASA supports a highly scalable and open architecture that allows organizations to scale the application to thousands of users. The system is web enabled, with a thin client for low cost of ownership, zero client maintenance and flexible accessibility.

Commenting on ASA, Tom Flynn, Managing Director, SID2U says 'ASA gives users enhanced usability and network management flexibility to meet the real needs of their environment and free up administration time to focus on more business critical issues. ASA is designed to aid Network Managers, System Administrators as well as IT Directors, CIO, Financial Managers, Security and Compliance Managers to get a real time holistic view of the network environment, application and performance. The all-in-one system is most comprehensive and cost-effective, ideal for desktop and network management. ASA will help companies in almost any vertical and today we are offering a '30-day free trial' use of ASA. Register online at <http://www.sid2u.com/register.html>.
